# 12-stage binary counter

# HEF4040B MSI

### DESCRIPTION

The HEF4040B is a 12-stage binary ripple counter with a clock input ( $\overline{CP}$ ), an overriding asynchronous master reset input (MR) and twelve fully buffered outputs ( $O_0$  to  $O_{11}$ ). The counter advances on the HIGH to LOW transition of  $\overline{CP}$ . A HIGH on MR clears all counter stages and forces all outputs LOW, independent of  $\overline{CP}$ . Each counter stage is a static toggle flip-flop. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.

Fig.1 Functional diagram.

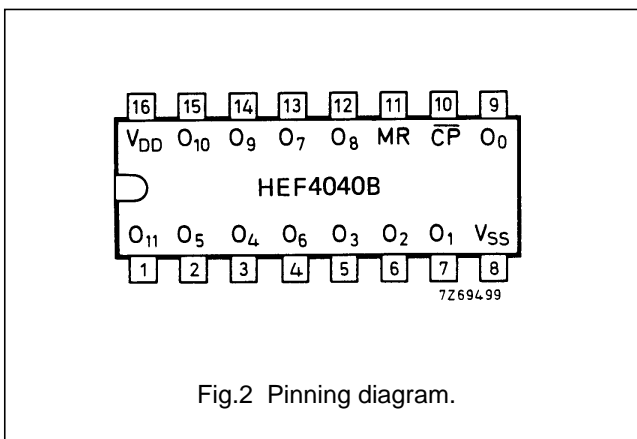

Fig.2 Pinning diagram.

### PINNING

- $\overline{CP}$  clock input (HIGH to LOW edge-triggered)
- MR master reset input (active HIGH)
- $O_0$  to  $O_{11}$  parallel outputs

### APPLICATION INFORMATION

Some examples of applications for the HEF4040B are:

- Frequency dividing circuits
- Time delay circuits
- Control counters

### FAMILY DATA, $I_{DD}$ LIMITS category MSI

See Family Specifications

- HEF4040BP(N): 16-lead DIL; plastic (SOT38-1)
  - HEF4040BD(F): 16-lead DIL; ceramic (cerdip) (SOT74)
  - HEF4040BT(D): 16-lead SO; plastic (SOT109-1)
- ( ): Package Designator North America
