

## LM118/LM218/LM318 Operational Amplifiers

### General Description

The LM118 series are precision high speed operational amplifiers designed for applications requiring wide bandwidth and high slew rate. They feature a factor of ten increase in speed over general purpose devices without sacrificing DC performance.

The LM118 series has internal unity gain frequency compensation. This considerably simplifies its application since no external components are necessary for operation. However, unlike most internally compensated amplifiers, external frequency compensation may be added for optimum performance. For inverting applications, feedforward compensation will boost the slew rate to over  $150\text{V}/\mu\text{s}$  and almost double the bandwidth. Overcompensation can be used with the amplifier for greater stability when maximum bandwidth is not needed. Further, a single capacitor can be added to reduce the 0.1% settling time to under  $1\ \mu\text{s}$ .

The high speed and fast settling time of these op amps make them useful in A/D converters, oscillators, active filters,

sample and hold circuits, or general purpose amplifiers. These devices are easy to apply and offer an order of magnitude better AC performance than industry standards such as the LM709.

The LM218 is identical to the LM118 except that the LM218 has its performance specified over a  $-25^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  temperature range. The LM318 is specified from  $0^{\circ}\text{C}$  to  $+70^{\circ}\text{C}$ .

### Features

- 15 MHz small signal bandwidth
- Guaranteed  $50\text{V}/\mu\text{s}$  slew rate
- Maximum bias current of 250 nA
- Operates from supplies of  $\pm 5\text{V}$  to  $\pm 20\text{V}$
- Internal frequency compensation
- Input and output overload protected
- Pin compatible with general purpose op amps

### Fast Voltage Follower

(Note 1)

DS007766-13

**Note 1:** Do not hard-wire as voltage follower ( $R1 \geq 5\ \text{k}\Omega$ )

**Absolute Maximum Ratings** (Note 7)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

| Input Voltage Range            | $V_S = \pm 15\text{V}$  | ±11.5       |     |     | ±11.5 |     |     | V     |
| Common-Mode Rejection Ratio    |   | 80          | 100 |     | 70    | 100 |     | dB    |
| Supply Voltage Rejection Ratio |   | 70          | 80  |     | 65    | 80  |     | dB    |

**Note 2:** The maximum junction temperature of the LM118 is 150°C, the LM218 is 110°C, and the LM318 is 110°C. For operating at elevated temperatures, devices in the H08 package must be derated based on a thermal resistance of 160°C/W, junction to ambient, or 20°C/W, junction to case. The thermal resistance of the dual-in-line package is 100°C/W, junction to ambient.

**Note 3:** The inputs are shunted with back-to-back diodes for overvoltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1V is applied between the inputs unless some limiting resistance is used.

**Note 4:** For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

**Note 5:** These specifications apply for  $\pm 5\text{V} \leq V_S \leq \pm 20\text{V}$  and  $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$  (LM118),  $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$  (LM218), and  $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$  (LM318). Also, power supplies must be bypassed with 0.1 μF disc capacitors.

**Note 6:** Slew rate is tested with  $V_S = \pm 15\text{V}$ . The LM118 is in a unity-gain non-inverting configuration.  $V_{IN}$  is stepped from -7.5V to +7.5V and vice versa. The slew rates between -5.0V and +5.0V and vice versa are tested and guaranteed to exceed 50V/μs.

**Note 7:** Refer to RETS118X for LM118H and LM118J military specifications.

**Note 8:** Human body model, 1.5 kΩ in series with 100 pF.

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
